

## How to Make Snow Cones

1. Plug the snow cone machine in.
2. Fill the hopper on top of the machine with ice. You must push the motor switch in and hold it as you push down the pusher handle to force the ice against the spinning shaver head. More pressure gives coarser snow – lighter pressure gives a finer snow. Colder ice gives finer snow in this machine but if it is too cold, it might not feed as well.
3. Use the snow cone Dipper to scoop the ice and mound in the snow cone cup.
4. Pour Ready-to-Use syrup over the top of the snow cone.

## Tips for buying supplies

- One gallon of Ready-to-Use Syrup yields approximately 128 servings
- 40 lbs. of ice makes approximately 120 cups.

**NOTE:** Never allow any foreign or metallic object around the shaver area of the Shav A Doo. Ice picks, scoops, and debris that may be in the ice often damage blades.

## Care and Cleaning

- Unplug snow cone machine
- Remove all ice out of machine
- With cloth dry the inside and outside.

**\* \* DANGER \* \* \***

**Do NOT immerse the equipment in water.**

**Unplug your machine before servicing.**
